

Reverence for the life

From with the construction of the "bell palace" to linked activities and the discussion with the life and work Albert Schweitzers the idea arose for the project "Noah's ark". A contemporary leisure site and educational institution should originate which devotes itself to the work of all Nobel peace prize bearers and provides this in particular to youngsters further. As the uppermost basic principle of all activities this should be valid of Albert Schweitzer together with Albert Einstein stamped quotation „**for reverence for the life**“.

The "bell palace" shows ideally source place for this project, because this became in the former "border area", only few kilometres of the internal border at that time and the „iron curtain“, removes established. The border separated Germany, Europe and the world for decades in the east and west, here two highly prepared armies of two world powers which could have caused any time a new (atomic) world war were confronted. The today's Nobel peace prize bearer Michail Gorbachev prevented such a possible escalation by his politics of glasnost and perestroika. Also not to use his decision, the army against the population rebelling in the GDR, allowed on the 9th of November, 1989 the peaceful case of the „iron curtain“.

Therefore the "bell palace" with the patron Michail Gorbachev is predestined for activities for the understanding among nations, peace protection and with it to the related subject fields which protect a living together of all people and cultures in a healthy and healthy environment on this planet.

Models and „ideal weight-bearing columns“ of this institution should be the Nobel peace prize bearers with in each case own subject fields, e.g.:

- Henry Dunant: Nonviolence
- Albert Schweitzer: Love and reverence for the life
- Martin Luther King: against race discrimination
- Mother Teresa: Human dignity

With the copy of the Noah's ark a project which will be unique in this form worldwide can originate. Starting point is the work of the philosopher and Nobel peace prize bearer Albert Schweitzer and his maxim „reverence for the life“. The subject complexes environment protection, protection of animals and climate protection, understanding among nations and human dignity are more topical than ever. Under these points of view concrete projects should be initiated which Live this (Together) of the people and animals as well as the protection of endangered species and climate protection on our planet protect for the future.

In every European country a very central town which becomes a location for a such equipment should be found. Must be forced and be supported these facilities (also financially) by the member states of the European Union and by the EU. Also the media (above all big media groups) should be integrated into the project and perform public-relations support (PR etc.).

The Noah's ark stands symbolically for the protection of the animals and the people in a destroying environment. Hence, a centre which serves the ideal purposes of the environment protection and protection of animals should be also conceived as a Noah's ark and be decorated.

The principle of the Noah's ark consists in offering protection to threatened living beings. Because the natural resources are endangered for many animals today by an increasingly destroyed environment and the changing climate, this subject is more topically than ever. Hence, it is a matter of offering possibilities of information and educational possibilities beside the pure "protective function" also to inform about the protection of animals,

environment protection and climate protection and of stimulating to own active action. The Noah's ark can get with it a new, contemporary function and job.

It is a matter of building a centre which fulfils all abovementioned qualities and can become, in addition, still a tourist attraction to achieve in this manner additional attention.

All these conditions can be fulfilled with the construction of a building in the style of the historical Noah's ark with the biblical traditional magnitude. The „environmental centre and protection of animals centre Noah's ark“ should correspond to the following functions:

- An enough big property (at least 25 to 30 hectares) in free, unobstructed natural landscape or also in the sceneries which have already suffered by negative cultivation
- Completely self-sufficient disposal and care in the lastingness sense (Biological sewage plant, energy supply, e.g., by geothermal energy, biomass or photovoltaik)
- Enough space in the "hull" to the admission and position appropriate for protection of animals of numerous animal species (function of an "animal home")
- An enough big foundation to the admission of all care technology, storerooms, multi-storey car park for visitors etc. this foundation to be established in massive construction should not be put on from the outside obviously and "disappear" in a hill to be piled up.
- The whole area should lie for the security and for optical reasons in park scenery and be surrounded by waters (small lakes, ditches etc.)
- All around the ark and in the waters conveniently the islands which take up other facilities as for example a small veterinary hospital and other purpose-appropriate uses should be put on.

The project should serve ideal purposes. Moreover a suitable charitable organisation in whose sponsorship the project is "managed" is to be founded. Income may serve only the fulfilment of the "ark purpose". The income should be achieved from donations and sponsors money, entrance fees and economic purpose companies (e.g., catering trade).
